

Ohori Grinding

We innovate for peak performace

## Ultra-High Precision Grinding for your Product Innovations

Ohori Grinding Company is your process manufacturer specializing in ultra-high precision grinding of components made of metal and other materials.

We serve customers in Asia and Europe in a variety of demanding fields such as

- Machine Tools
- F1 Racecar Components
- Automotive Component Prototyping
- Medical Technology
- Aerospace compliant with AS/EN9100

We can meet customer requests, from working with extremely small components to large objects, several meters in size. Our highly skilled technicians finish off the products using their delicate senses and ensure quality with a top-of-the-line inspection system.

Ohori Grinding Company processes rare metals such as iridium and the machining of 1 - 100 parts per month is possible while maintaining the same quality for each part. We like to process difficult-to-machine materials. Aluminum, stainless steels and titanium can be grinded. Of course V grooves, R grooves and polyhedral angles are possible and our setup time is short compared to that of NC.

We grind long and large objects up to a diameter of 540 mm and a lenght of 2,500 mm. Inner diameter machining from Ø 1 mm to small diameters is possible. Using a brace for long-length processing, we can achieve precision of less than 0.002 mm and we are able to deal with deep, narrow holes.

## We excel in

- External Grinding
- Inner Grinding
- Taper Grinding
- Profile Grinding
- Jig Grinding
